

## Use of Animal Research

The Brittle Bone Society is a member of the Association of Medical Research Charities (AMRC) and will only fund research involving live animals when this is essential to the outcome of the research, there is no reasonable alternative method of obtaining the data, and when pain and distress to animals is minimised.

The use of animals must be fully justified in all applications for research grants.

The Charity recognises that experiments on living animals are an essential part of research to improve the understanding and treatment of human and animal disease. The Charity requires, however, that all experiments should be carried out with due concern for the welfare of the animals and using the minimum number necessary to provide clear data in well-designed experiments.

All research projects funded by the Charity which involve the use of protected animals in regulated procedures under the Animals (Scientific Procedures) Act 1986 must have a Home Office project licence, and each individual working on experiments using animals must have a personal licence. The institution must also have an establishment licence.

The Charity supports the [AMRC statement on the use of animals in research](#). All applicants and grant holders must have regard to animal welfare and advances in the refinement, replacement and reduction of animal use, implement the principles in the cross funder guidance 'Responsibility in the Use of Animals in Biosciences Research' and make use of the 'ARRIVE' guidelines in designing their study.

The Charity will not fund research applications which do not comply with this policy.
